Presentation Pilot Pro™

Wireless PowerPoint Remote

When you step to the front of a room for a presentation, there is no substitute for being prepared. With Presentation Pilot Pro, preparation is in the palm of your hand. Presentation Pilot Pro provides complete slide control and enables complete mouse control. So whether you are clicking through a presentation or navigating a website, you can enjoy the freedom of motion that only a 50 foot range RF remote control can provide.

A thoughtful layout and ergonomic design makes Presentation Pilot Pro the perfect choice for a presentation remote. There is no complicated set-up, just plug in the USB receiver, pick up Presentation Pilot Pro and you have complete mouse control and are ready to present.

So grab Presentation Pilot Pro and start winning over the world... one audience at a time.

Product Descriptions – 25/50/100 Words

50 Words – Presentation Pilot Pro is the ideal wireless presentation remote to use with PowerPoint and Keynote. Pilot Pro features slide control, slide hide, laser pointing, complete mouse control and a USB receiver that stores inside. It's 50 feet of radio-frequency range provides freedom of motion for audience interaction during a presentation.

100 Words - Presentation Pilot Pro is the ideal wireless presentation remote to use with PowerPoint and Keynote. Pilot Pro features slide control, slide hide, laser pointing, complete mouse control and a USB receiver that stores inside. It's 50 feet of radio-frequency range provides freedom of motion for audience interaction during a presentation. Just plug in the USB receiver and go. There is no complicated set-up. This innovative remote ensures that control is at your fingertips wherever you stand in the room. With such a complete set of features, Educators and Corporate Professionals agree that Presentation Pilot Pro is key to good presenting.

Features, Advantages and Benefits

Wireless Presentation Remote

Presentation Pilot Pro lets you move freely about the room while controlling PowerPoint, Keynote and other presentation software. In addition to presentation control, the built-in mouse lets you control virtually any software

on your PC and the laser pointer lets you highlight items on-screen or off. With 50' of wireless range, you are able to move freely about the room to interact with the audience during a presentation while remaining in complete control of your slides.

Slide Control

Presentation Pilot Pro is designed to provide complete presentation control in the hand of the presenter. The forward icon advances slides and the back icon provides a reliable method to return to the previous slide. Slide hide causes a blank screen to appear and returns the attention of the audience to the presenter.

Mouse Control

Presentation Pilot Pro has complete mouse control capability, which is useful in interactive presentation scenarios or when you browse directories or the Internet. The pointing button is centrally located for convenience and the patented ClickTrigger activates your choices with a simple left click. There is also a dedicated right click button.

Patented ClickTrigger

Interlink Electronics pioneered the use of a ClickTrigger. Located in the trigger position on the underside of the remote, ClickTrigger provides a convenient index finger button that makes it possible to advance a slide or activate a mouse selection. The ClickTrigger is comfortable and intuitive, putting the speaker at ease.

Range

With a radio frequency (RF) range of 50 feet, maintain complete control of the presentation, even from across the room. Curtains, people and walls are no obstacle for Presentation Pilot Pro. With RF technology, the 2.4GHz signal is omni-directional so presenters never need to worry about where the mouse is pointing.

Laser Pointing

An integrated laser pointer can be used to highlight key points and direct the attention of an audience to a specific detail in a presentation or another point in the room.

Individual Codes and Multiple Channels

Every Presentation Pilot Pro has a unique code that it shares with its' receiver. This ensures that no other remote control will interfere with your presentation. Multiple channels make it possible for you to change the frequency band that Pilot Pro operates to achieve the best possible range.

Design

Presentation Pilot Pro was designed for both comfort and functionality. The ergonomic curvature and suede feel case ensure that the remote stays firmly in your hand. The buttons are thoughtfully laid out to enable easy reach of all the remote features. A receiver bay is provided so that the remote is easy to carry from place to place. Storing the receiver in the remote turns off the power preventing unnecessary battery drain.

Simple to Use

Presentation Pilot Pro is ready to use right out of the box. There is no complex installation and no compatibility hassles. Carry Presentation Pilot Pro to every presentation. Plug the receiver into any available USB port and start presenting. Presentation Pilot Pro begins working from the moment you plug in the receiver for the first time.

Positioning

Educators – 6.6 Million in the US

Presentation Pilot Pro is for the professional educator that uses presentation software in the classroom or lecture hall. The 50" range gives them the freedom they need to move about the room and interact with students. A mouse is essential because multiple software programs are often used in a single lesson plan. Presentation Pilot Pro enables the educator to navigate multiple programs to get their message across.

Value Conscious Mobile Professionals

Presentation Pilot Pro is for the value conscious mobile professional that needs a fully featured presentation remote control, and is on a tight budget. Pilot Pro takes the features of the best remote controls and makes them affordable for the average business consumer.
